## Veterinary Clinical Pathologist

IDEXX has been changing the veterinary, livestock, water testing, and dairy markets for the better since 1983. Headquartered in the US and a leader in innovative pet healthcare, we service practicing veterinarians around the world with a broad range of diagnostic and information technology-based products and services. Our products enhance the ability of veterinarians to provide advanced medical care, improve staff efficiency, and build more economically successful practices. We also provide worldwide diagnostic tests and information for livestock and poultry, as well as testing for the quality and safety of water and milk. Through innovation, passion, and integrity, we've set a new standard for detection and analysis that continues to enhance the well-being of pets, livestock, and people around the world.

### The Opportunity

Due to our continuing growth we have identified the need for a full time Veterinary Pathologist to join our team in Australia. To be a success in this role you will be an experienced Veterinary Pathologist with qualifications in clinical pathology.

Your day will be spent delivering an efficient, effective, comprehensive and timely veterinary pathology service with diagnostic clinical pathology evaluations, interpretations and follow-up consultation. You will have access to the very latest high-resolution digital pathology solutions to enable you to collaborate easily with your IDEXX colleagues throughout the country and the world.

In addition, the responsibilities of our pathology team include participating in training and education opportunities for veterinary clients, participating in internal and external quality control programs within the national laboratory network and contributing to the continuous quality improvement processes.

Our professional team environment provides great opportunities for Continuing Professional Development and excellent support for your career.

### What do you need to succeed?

We are looking for a Clinical Pathologist with interest predominantly in companion animals. A veterinary degree suitable for Australian registration is required, previous experience in diagnostic veterinary pathology and a demonstrated commitment to high quality service. Diplomates of the ACVP or ECVP or Fellows of the ANZCVSc are preferred, although other highly qualified applicants will be considered.

### What we can offer?

- This role offers an opportunity to join a global market leader that continues to reinvest \$100M per annum into research and development devoted to veterinary diagnostics.
- We hold regular consensus rounds to provide the very best in connected teamwork towards excellence in diagnostics.
- We are committed to your ongoing development with our education support initiatives, we provide ongoing health and wellness activities, and voluntary community leave entitlements.
- Most importantly, this role offers you an opportunity to make a difference and positively impact the community alongside a fantastic local team who pursue our purpose with passion.

If you are interested in making a difference with a growing market leader, please forward your application to Kathryn Kelly, Talent Acquisition Specialist, [Kathryn-Kelly@idexx.com](mailto:Kathryn-Kelly@idexx.com).
