

Marie Curie Training Courses

Summer School 2007 – Avian V3/V4

NON TUMORAL AVIAN VIRAL DISEASES WITH INCLUSION BODIES

- Avian Adenovirus group II

- ▣ Histological lesions: Practical

- ◆ V3: Spleen, young Pheasant, experimental inoculation
 - ◆ V4: Spleen, Turkey, 5 weeks old, sudden onset of high mortality

NON TUMORAL AVIAN VIRAL DISEASES WITH INCLUSION BODIES

- Avian Adenovirus group II : Histology

Acute, severe multifocal to coalescent fibrinoid necrosis of the red pulp with pycnosis of white pulp

Severe, multifocal, lymphomacrophagic hyperplasia of white and red pulp, lymphoid cells pycnosis and « starry sky »

NON TUMORAL AVIAN VIRAL DISEASES WITH INCLUSION BODIES

- Avian Adenovirus group II : Histology

Pale, slightly basophilic, bad defined inclusion bodies with chromatin margination and nucleus hypertrophy in lymphoblastic cells and macrophages

NON TUMORAL AVIAN VIRAL DISEASES WITH INCLUSION BODIES

- Avian Adenovirus: Conclusion

- ✦ Frequent infectious viral diseases in avian
- ✦ Many different avian species (poultry, wild, cage and game birds)
- ✦ Located in numerous different tissues (liver, spleen, macrophages, respiratory and glandular epitheliums)
- ✦ Lesions
 - ◆ Severe, acute, multifocal or extensive necrosis +++
 - ◆ **Inclusions bodies: constant and often numerous**

Adenoviruses group I
(acute, severe form)

Adenoviruses group I
(subacute, mild form)

Adenoviruses group II
