

ECVP/ESVP Summer School in Veterinary Pathology

Marie Curie Training Courses

Summer School 2007 – Liver 86-2052-3

86-2052

Tissue ID: Liver

Diffuse vacuolization of hepatocytes.

Vacuoles are primarily microvesicular with areas of macrovesicular change as well.

Vacuoles are distinct and round, suggestive of lipid.

Minimal mixed inflammatory cells in portal tracts

Minimal brown granular pigment in centrilobular hepatocytes (probably lipofuscin)

Diagnosis: Feline Fatty Liver syndrome
