

Anatomic Veterinary (Comparative) Pathologist / Senior Research Scientist

Weill Cornell Medical College's (WCM) and Memorial Sloan-Kettering Cancer Center's (MSK) Center of Comparative Medicine and Pathology (CCMP) and The Rockefeller University's Comparative Bioscience Center's (CBC) shared Laboratory of Comparative Pathology (LCP) is seeking applicants for a Comparative Pathologist position, to be appointed at Senior Research Scientist level. This is a 12 to 15-month term appointment, with the possibility of reappointment.

Responsibilities include providing diagnostic and research pathology support to 4 biomedical institutions that conduct world-class biomedical research across diverse scientific disciplines. CCMP and CBC employ a staff of approximately 300 people, including 13 veterinarians (11 ACLAM and 2 ACVP board-certified pathologists), responsible for the daily care and use of approximately 250,000 animals from a variety of species, including mice, rats, hamsters, guinea pigs, rabbits, amphibians, fish, pigs, birds, and non-human primates. An external consultant veterinary clinical pathologist also supports the program.

The successful candidate will take advantage of a large and diverse laboratory animal caseload, and state-of-the-art facilities housed within the LCP, providing capacity for necropsy, histology, immunohistochemistry, in situ hybridization, whole slide digital image analysis, hematology, clinical chemistry, microbiology, parasitology, and serology. Other core facilities housed within the institutions provide access to in vivo imaging, transmission and scanning electron microscopy, confocal microscopy, and laser capture microdissection equipment and expertise. The successful candidate will be actively involved in the training of postdoctoral fellows in laboratory animal medicine, as well as an anatomic pathology resident focused on comparative pathology. Collaborative research is encouraged.

Applicants must possess a DVM/VMD from an AVMA-accredited or equivalent institution. Certification by the American College of Veterinary Pathologists (ACVP) or European College of Veterinary Pathologists (ECVP) and/or a doctoral degree in a related discipline is preferred, although qualified board-eligible applicants will be considered.

Interested individuals should submit a statement of accomplishments and career goals, *curriculum vitae*, and three letters of reference to Dr. Sebastián Carrasco. Review of applications will begin immediately and continue until a suitable candidate is selected.

Sebastián Carrasco DVM, MPVM, MSc, PhD, Dipl. ACVP
