Summer School 2004 – CNS Case 2

Case 2 nr T2 (N265/04). Tissue from a dog

Description:

Cross section of the cervical spinal cord.

Intradural extramedullary plake like leptomeningeal tumour. Formed by twomain cele population. One are fusiform elongated cells which show interlacing bundles and meningotheial cells delineated by fine collagenous fibers. Other cells have ovoid vesicular nuclei, prominent nucleolus and abundant cytoplasm with indistinct margins. Foci of condroid metaplasia. Osseus metaplasia with blood-marrow cells in their cavity

Morphological diagnosis: Transitional meningioma
